ACE

Aerosol/Cloud/Ecosystems Mission

■ What is ACE?

- ACE is a [tier-2 2007 Decadal Survey](#) mission focusing on Aerosol, Cloud systems, ocean Ecosystems, and the interactions among them.

■ ACE Goals

Improved understandings of Earth system interactions among aerosols, cloud and precipitation systems, and ocean ecosystems, specifically

- Quantify direct radiation effect of aerosols
- Assess indirect effects of aerosols through modification of hydrometeor profiles in cloud systems
- Observe and distinguish those ocean ecosystem components that actively take up and/or store carbon dioxide
- Measure and quantify the linkage between the ocean ecosystems and atmospheric aerosols

Achievement of these goals will result in enhanced capabilities to observe and predict changes to the Earth's hydrological cycle and energy balance in response to climate forcings.

ACE 2011-2015 Progress Report and Future Outlook

by

ACE Science Study Team

Themes	Focused Science Questions	Geophysical Parameters	Measurement Requirements	Mission Requirements
T1. Morphology Document occurrence, macroscale structure, and decadal scale changes of clouds and precipitation and their interaction with large-scale meteorological and thermodynamic forcing.	Q1. Climate Sensitivity What is the sensitivity of the climate system to cloud structure and variability? T1 T2 T3 T4 <ul style="list-style-type: none"> What is the role of natural and anthropogenic aerosol in modulating cloud system occurrence and properties? T1 What microphysical processes dictate the lifecycle and coverage of clouds under various atmospheric conditions? T1 T2 What dictates the processes that cause and modulate precipitation in cloud systems? T3 	GP1. Hydrometeor Layer Detection Q1 Q2 Q3 Q4 GP2. Simultaneously occurring Cloud and Precipitation Thermodynamics Phase profile Q1 Q2 Q3 Q4 GP3. Simultaneously occurring Cloud and precipitation microphysical properties profiles (Water Content, particle size, and number concentration) Q1 Q2 Q3 Q4 GP4. Precipitation Rate Profile in light and heavy (> 5 mm/hr) precipitation Q1 Q2 Q3 Q4 GP5. Profiles of Cloud Optical Depth, single scattering albedo, and asymmetry parameter Q1 Q2 Q3 Q4 GP6. Surface, TOA Cloud Radiative Effects Q1 Q2 Q3 Q4 GP7. Latent Heating Profile in light and heavy (> 5 mm/hr) precipitation Q1 Q3 Q4 GP8. Radiative Heating Profile Q1 Q2 Q3 Q4 GP9. Cloud-Scale Vertical Motion Q1 Q4 GP10. Aerosol/CCN number concentration profile Q1 Q2 Q3	TM1. 2-Frequency (W-, Ka-bands), Scanning Doppler Radar (with radiometer channels) GP1 GP2 GP3 GP4 GP5 GP6 GP7 GP8 GP9 TM2. High Spectral Resolution Lidar GP1 GP2 GP3 GP5 GP6 GP8 GP10 TM3. Narrow Swath Vis Imager (0.6 microns, 1.6 microns, 2.1 microns) GP2 GP3 GP5 GP6 GP8 GP10 <u>Baseline Mission</u> BM1. 3-Frequency (W-, Ka-, Ku-bands), Scanning Doppler Radar (with radiometer channels) GP1 GP2 GP3 GP4 GP5 GP6 GP7 GP8 GP9 (replaces TM1) BM2. High Spectral Res. Lidar (HSRL) GP1 GP2 GP3 GP5 GP6 GP8 GP10 (replaces TM2) BM3. High Resolution Narrow Swath VNIR-SWIR Polarimeter GP6 GP8 GP10 (Replaces TM3) BM4. Narrow Swath High Freq. (183, 389 GHz) Microwave GP2 GP3 GP4 GP5 GP6 GP7 GP8	We define the threshold ACE Clouds Mission as those elements of this matrix that are in bold font . We suggest that boldface science objective and questions in columns 1 and 2 could ultimately be addressed by the measurements listed as the Threshold Mission in the Measurement Requirements Column. Elements of this matrix in <i>italicized font</i> are defined as a <i>Baseline Mission</i> and designate important science questions that require a more aggressive set of coordinated measurements that are listed in italicized font. The set of baseline and threshold ACE clouds retrieval algorithms will be synergistic such that multiple measurements contribute to the retrieval of a geophysical parameter. For instance while microwave brightness temperatures cannot generally be used to retrieve cloud microphysics, when passive microwave is combined with multi frequency Doppler radar, the microwave brightness temperatures provides an important constraint on the retrieval algorithm.
T2. Microphysics Document the microphysical properties of liquid, ice, and mixed phase clouds and precipitation with a specific focus on high latitude snow and light liquid precipitation (less than 1 mm/hr) at all latitudes that influences cloud morphology and lifecycle and ultimately radiative balance.	Q2. Climate Forcing – Solar (T4) How will shortwave cloud forcing change as the climate warms? T1 T2 T3 T4 <ul style="list-style-type: none"> Will the coupling between cloud occurrence and morphology with atmospheric motions and the thermodynamic structure result in fundamental changes to the planetary albedo? T1 T2 What is the specific role of aerosol in modulating the properties of clouds and the planetary albedo under a changing climate? (T2, T3) 			
T3. Microphysical Processes Identify the occurrence of microphysical processes that cause changes to profiles of aerosol, clouds, and precipitation properties. Concurrently quantify the process rates of important microphysical processes such as autoconversion and accretion in liquid and ice-phase stratiform and convective clouds.	Q3. Climate Forcing – Infrared (T4) How will longwave cloud forcing change as the climate warms? T1 T2 T3 T4 <ul style="list-style-type: none"> What is the coupling between thermodynamic structure convective processes and the properties of convective anvils in modulating the coverage and properties of tropical anvil cirrus T1 T2 T3 What is the role of aerosol in changing the microphysical properties of tropical anvils and modulating their coverage, persistence, and feedbacks to the water cycle in the upper troposphere? T1 T2 T3 			
T4. Energetics Understand the maintenance of and changes to the energetic balance of the atmosphere and earth system due aerosol, clouds, and precipitation.	Q4. Water Cycle and Energy Transport (T4) What is the role of cloud processes (specifically mixed phase) in snow and rain production in middle and high latitude cloud systems? T1 T2 T3 T4 <ul style="list-style-type: none"> What role does the seasonal cycle of middle latitude cloud radiative forcing play in the poleward transport of heat and how is this radiative forcing partitioned as function of cloud genre? T4 To what degree do various microphysical processes when coupled with large-scale dynamics modulate the precipitation production within middle and high latitude frontal systems? T2 T3 What is the role of convection versus large-scale dynamics in producing precipitation in the middle and high latitudes? T1 T3

Category	Focused Questions*	Approach	Maps to Science Question	Measurement Requirements	Instrument Requirements	Platform Requir'ts	Other Needs	
Ocean Biology	1 What are the standing stocks, composition, & productivity of ocean ecosystems? How and why are they changing? [OBB1]	Quantify phytoplankton biomass, pigments, optical properties, key groups (functional/HABS), and productivity using bio-optical models & chlorophyll fluorescence	1 2 6	Water-leaving radiances in near-ultraviolet, visible, & near-infrared for separation of absorbing & scattering constituents and calculation of chlorophyll fluorescence Total radiances in UV, NIR, and SWIR for atmospheric corrections Cloud radiances for assessing instrument stray light	Ocean Radiometer • 5 nm resolution 350 to 755 nm ▷ 1000 – 1500 SNR for 15 nm aggregate bands UV & visible and 10 nm fluorescence bands (665, 678, 710, 748 nm centers) ▷ 10 to 40 nm width atmospheric correction bands at 748, 765, 820, 865, 1245, 1640, 2135 nm • 0.1% radiometric temporal stability (1 month demonstrated prelaunch) • 58.3° cross track scanning • Sensor tilt (±20°) for glint avoidance • Polarization insensitive (<1.0%) • 1 km spatial resolution @ nadir • No saturation in UV to NIR bands • 5 year minimum design lifetime	Orbit permitting 2-day global coverage of ocean radiometer measurements Sun-synchronous orbit with crossing time between 10:30 a.m. & 1:30 p.m. Storage and download of full spectral and spatial data Monthly lunar calibration at 7° phase angle through Earth observing port	Global data sets from missions, models, or field observations: <i>Measurement Requirements</i> (1) Ozone (2) Total water vapor (3) Surface wind velocity (4) Surface barometric pressure (5) NO ₂ concentration (6) Vicarious calibration & validation ** (7) Full prelaunch characterization (2% accuracy radiometric) <i>Science Requirements</i> (1) SST (2) SSH (3) PAR (4) UV (5) MLD (6) CO ₂ (7) pH (8) Ocean circulation (9) Aerosol deposition (10) run-off loading in coastal zone	
	2 How and why are ocean biogeochemical cycles changing? How do they influence the Earth system? [OBB2]	Measure particulate and dissolved carbon pools, their characteristics and optical properties	2 3					
	3 What are the material exchanges between land & ocean? How do they influence coastal ecosystems, biogeochemistry & habitats? How are they changing? [OBB1,2,3]	Quantify ocean photobiochemical & photobiological processes	2 4					
		Estimate particle abundance, size distribution (PSD), & characteristics	1 3 2	High vertical resolution aerosol heights, optical thickness, & composition for atmospheric corrections	Lidar • 0.5 km aerosol vertical resolution • 2 m sub-surface resolution • < 0.3% polarization misalignment • 0.0001 km ⁻¹ sr ⁻¹ aerosol backscatter sensitivity at 532 nm after averaging • < 4 ns e-folding transient response • Brillouin scattering capability; Receiver FOVs: 0-60 m; 0-120 m.			
		Assimilate ACE observations in ocean biogeochemical model fields of key properties (cf., air-sea CO ₂ fluxes, export, pH, etc.)	2					
	4 How do aerosols & clouds influence ocean ecosystems & biogeochemical cycles? How do ocean biological & photochemical processes affect the atmosphere and Earth system? [OBB2]	Compare ACE observations with ground-based and model data of biological properties, land-ocean exchange in the coastal zone, physical properties (e.g., winds, SST, SSH, etc), and circulation (ML dynamics, horizontal divergence, etc)	3 4 5 6	Subsurface particle scattering & depth profile	Polarimeter • Observation angles: 60° to 140° • Angle resolution: 5° • Degree of polarization: 1%			
	5 How do physical ocean processes affect ocean ecosystems & biogeochemistry? How do ocean biological processes influence ocean physics? [OBB1,2]	Combine ACE ocean & atmosphere observations with models to evaluate (1) air-sea exchange of particulates, dissolved materials, and gases and (2) impacts on aerosol & cloud properties	4	Broad spatial coverage aerosol heights and single scatter albedo for atmospheric correction. Subsurface polarized return for typing oceanic particles				
	6 What is the distribution of algal blooms and their relation to harmful algal and eutrophication events? How are these events changing? [OBB1,4]	Assess ocean radiant heating and feedbacks	5	Supporting Field & Laboratory Measurements • Primary production (NPP) measurement & round-robin algorithm testing • Inherent optical properties (IOPs) instrument & protocols development, laboratory & field (coastal and open ocean) measurement comparisons • Measure key phytoplankton groups across ocean biomes (coast/open ocean) • Expanded global data sets of NPP, CDOM, DOM, pCO ₂ , PSDs, IOPs, fluorescence, vertical organic particle fluxes, bio-available Fe concentrations				
		Conduct field sea-truth measurements and modeling to validate retrievals from the pelagic to near-shore environments	1 4 2 5 3 6	Ocean Biogeochemistry-Ecosystem Modeling • Expand model capabilities to assimilate variables such as NPP, IOPs, and phytoplankton species/functional group concentrations. • Improve model process parameterizations, e.g., particle fluxes				

* ACE focused questions are traceable to the four overarching science questions of NASA's Ocean Biology and Biogeochemistry Program [OBB1 to OBB4] as defined in the document: *Earth's Living Ocean: A Strategic Vision for the NASA Ocean Biological and Biogeochemistry Program*

** Specific vicarious calibration & validation requirements are defined in the ACE Ocean Ecosystem requirements document developed as part of ACE pre-formulation activities

Status of ACE

- With the release of the 2017 Decadal Survey the ACE Pre-formulation Study is in close-out mode
 - Activities to conclude by September 2018
 - A Final Report will be produced by then
- A workshop is being planned in late April 2018 for assessing ACE accomplishments and provide community feedback on the 2017 DS
 - *by invitation only*

Recommended NASA Flight Program Elements

Program of Record. The series of existing or previously planned observations, which **should be completed as planned**. Execution of the ESAS 2017 recommendation requires that the total cost to NASA of the Program of Record *flight missions from FY18-FY27 be capped at \$3.6B*.

- **Designated.** A new program element for ESAS-designated cost-capped medium- and large-size missions to address ***observables essential to the overall program*** and that are outside the scope of other opportunities in many cases. Can be competed, at NASA discretion.
- **Earth System Explorer.** A new program element involving competitive opportunities for medium-size instruments and missions serving specified ESAS-priority observations. ***Promotes competition among priorities.***
- **Incubation.** A new program element, focused on investment for priority observation opportunities needing advancement prior to cost-effective implementation, including an Innovation Fund to respond to emerging needs. ***Investment in innovation for the future.***
- **Venture.** Earth Venture program element, as recommended in ESAS 2007 with the addition of a new Venture-Continuity component to provide ***opportunity for low-cost sustained observations.***

Recommended NASA Priorities: Designated

TARGETED OBSERVABLE	SCIENCE/APPLICATIONS SUMMARY	CANDIDATE MEASUREMENT APPROACH	Designated	Explorer	Incubation
Aerosols	Aerosol properties, aerosol vertical profiles, and cloud properties to understand their direct and indirect effects on climate and air quality	Backscatter lidar and multi-channel/multi-angle/polarization imaging radiometer flown together on the same platform	X		
Clouds, Convection, & Precipitation	Coupled cloud-precipitation state and dynamics for monitoring global hydrological cycle and understanding contributing processes	Radar(s), with multi-frequency passive microwave and sub-mm radiometer	X		
Mass Change	Large-scale Earth dynamics measured by the changing mass distribution within and between the Earth's atmosphere, oceans, ground water, and ice sheets	Spacecraft ranging measurement of gravity anomaly	X		
Surface Biology & Geology	Earth surface geology and biology , ground/water temperature, snow reflectivity, active geologic processes, vegetation traits and algal biomass	Hyperspectral imagery in the visible and shortwave infrared, multi- or hyperspectral imagery in the thermal IR	X		
Surface Deformation & Change	Earth surface dynamics from earthquakes and landslides to ice sheets and permafrost	Interferometric Synthetic Aperture Radar (InSAR) with ionospheric correction	X		

Recommended NASA Priorities: Incubation/Other

TARGETED OBSERVABLE	SCIENCE/APPLICATIONS SUMMARY	CANDIDATE MEASUREMENT APPROACH	Designated	Explorer	Incubation
Atmospheric Winds	3D winds in troposphere/PBL for transport of pollutants/carbon/aerosol and water vapor, wind energy, cloud dynamics and convection, and large-scale circulation	Active sensing (lidar, radar, scatterometer); passive imagery or radiometry-based atmos. motion vectors (AMVs) tracking; or lidar**		X	X
Planetary Boundary Layer	Diurnal 3D PBL thermodynamic properties and 2D PBL structure to understand the impact of PBL processes on weather and AQ through high vertical and temporal profiling of PBL temperature, moisture and heights.	Microwave, hyperspectral IR sounder(s) (e.g., in geo or small sat constellation), GPS radio occultation for diurnal PBL temperature and humidity and heights; water vapor profiling DIAL lidar; and lidar** for PBL height			X

NASA Budget Compliance

- Liens from last decade into this one are substantial
- Very little flexibility to absorb funding challenges until mid decade
- Committee sought to keep liens lower on next decade
 - Allows more flexibility for next decadal survey
 - Some carry over of programs into subsequent decade is required

Summary

- Since its recommendation by the first 2007 Decadal Survey the ACE Study has made significant progress:
 - Advancing measurement concepts:
 - Lidars, Multi-angle Polarimeters and Radars
 - Airborne campaigns as proof of concept
 - Algorithm development --- GRASP-ACE will contribute to it
- New 2017 Decadal Survey proposes two new *Designated Missions* that can build upon ACE accomplishments:
 - Aerosols
 - Cloud-Convection-Precipitation (CCP)
- NASA HQ will soon provide guidance regarding new Pre-formulation Studies to advance these concepts (FY19)
